EXPT - 1

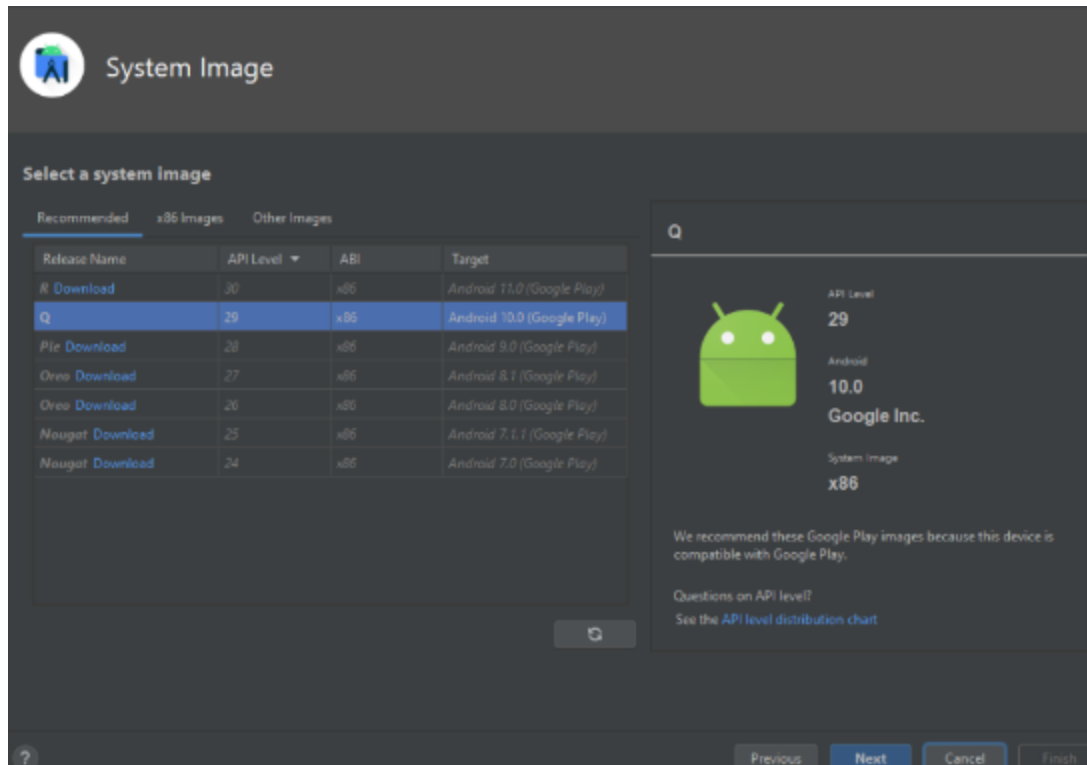

AIM: To install and configure flutter environment

Step-1:Download Android studio for Windows and sdk

Step-2:Create a new virtual device

Download the ANDroid version

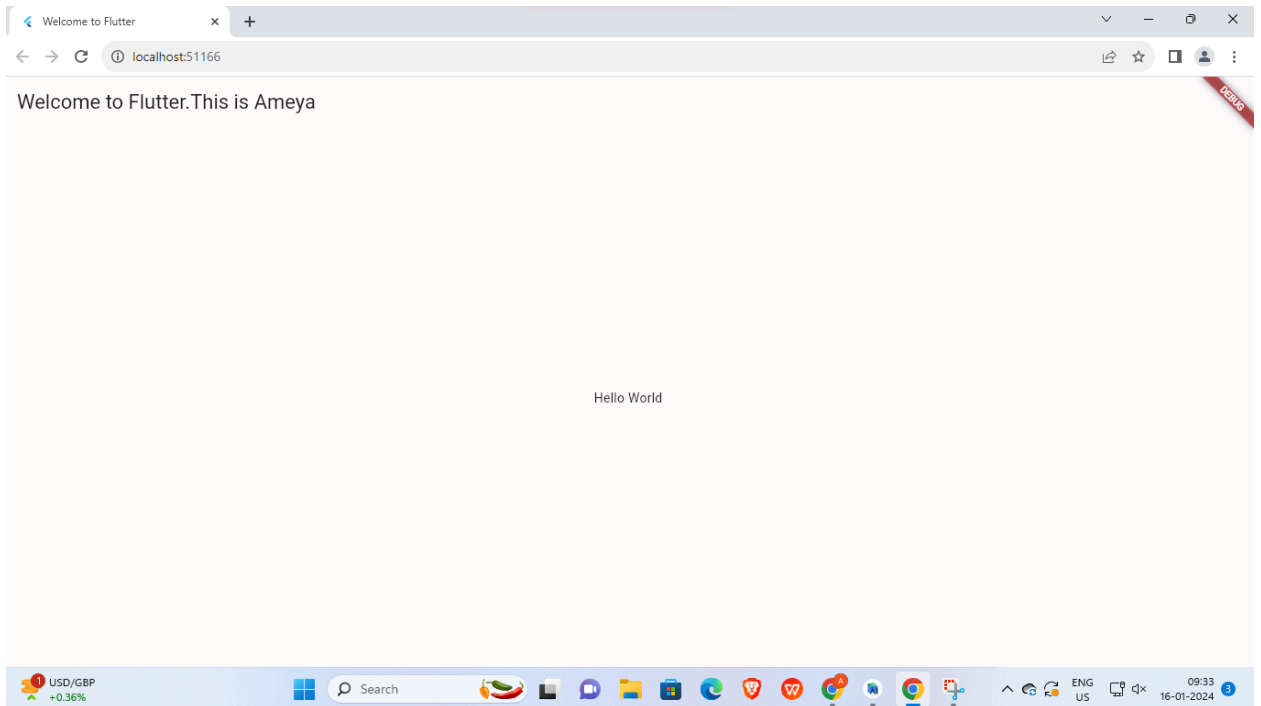

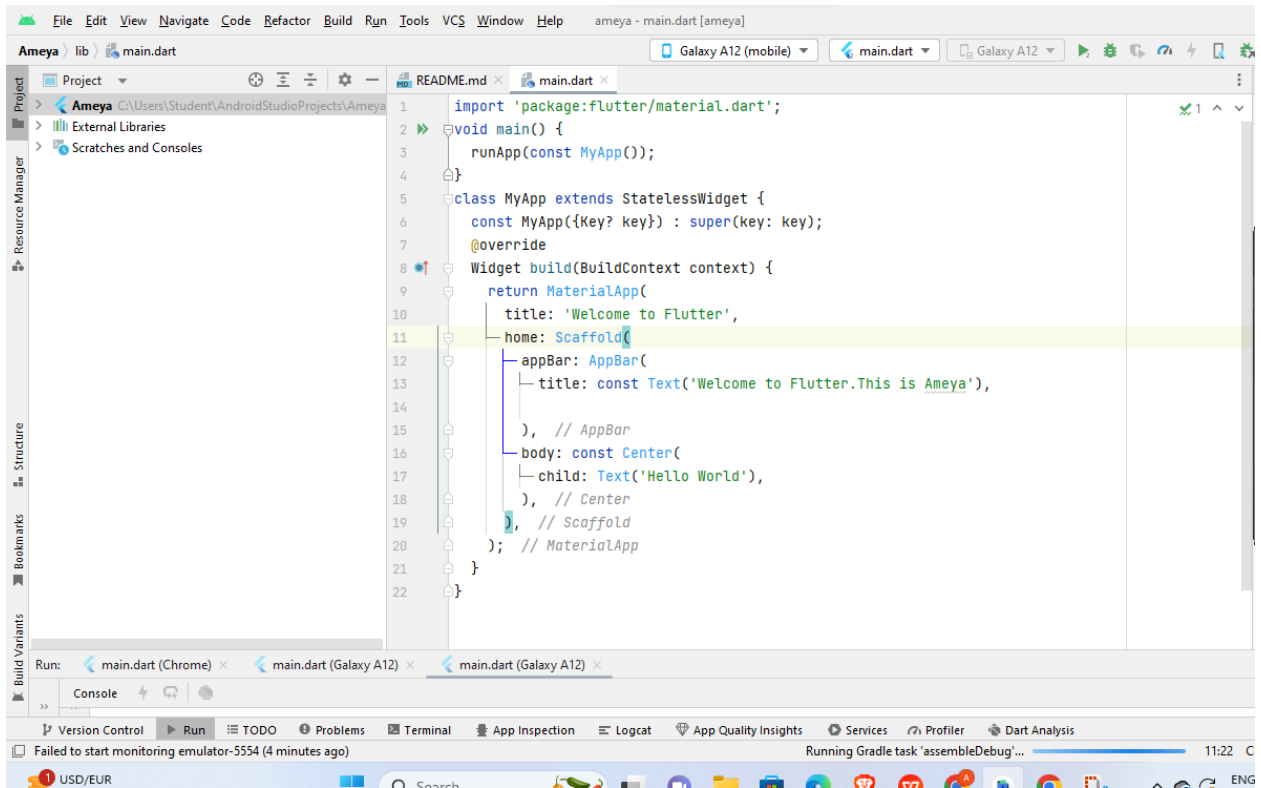

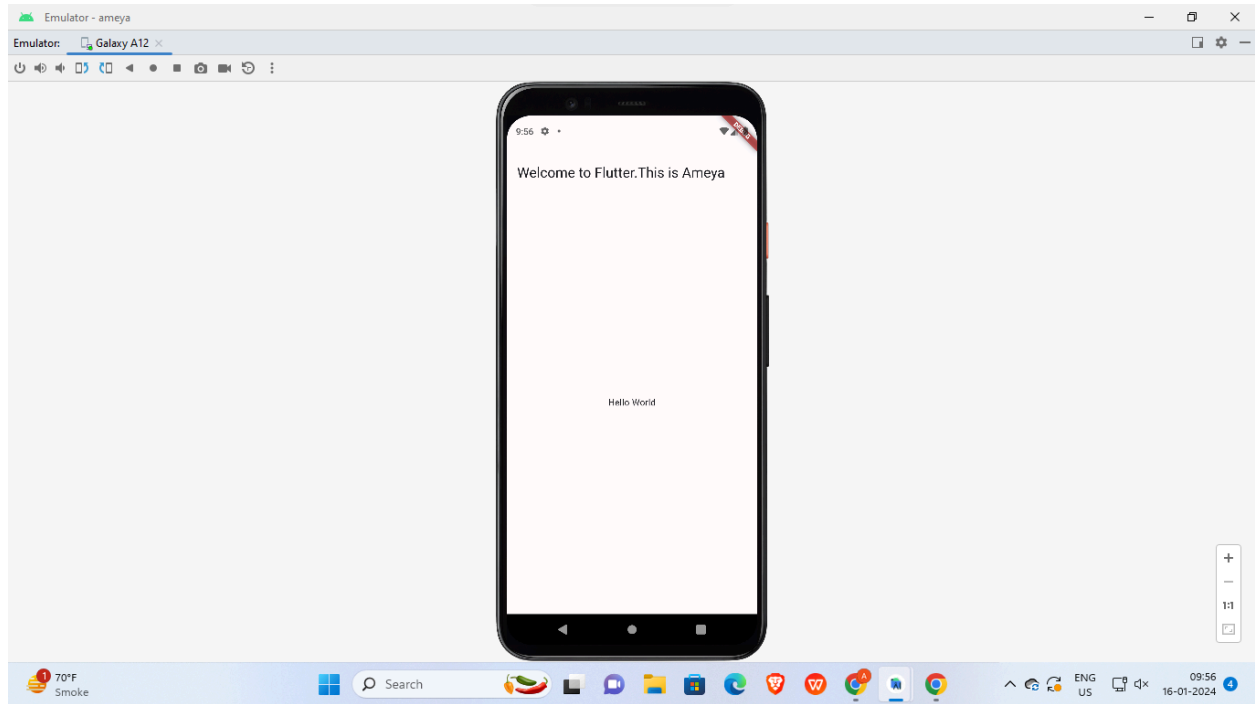

Create the app

1. Open the IDE and select Create New Flutter Project.
2. Select Flutter Application as the project type. Then click Next.
3. Verify the Flutter SDK path specifies the SDK's location (select Install SDK... if the text field is blank).
4. Enter a project name (for example, myapp). Then click Next.
5. Click Finish.
6. Wait for Android Studio to install the SDK and create the project.

Step 2: Run the app

1. Locate the main Android Studio toolbar:

Conclusion:

Thus, android studio and flutter is installed and app is created successfully
